IOSH
Managing Safely

RPA SAFETY SERVICES Ltd
www.rpasafetyservices.co.uk

A four day training course certified by Europe's leading occupational safety institute. Intended for managers and supervisors in any sector or organisation, it is designed to provide the information and skills required to manage health and safety.

Over the four days, candidates cover a range of topics which include:

- The law and their legal responsibilities
- Risk assessment
- Manual handling
- Fire prevention and management
- Hazardous substances

At the end of the course there is a final exam to demonstrate the candidates understanding. There is also a work based project to be completed which gives them the opportunity to apply their learning in the workplace, increasing the relevance and benefit of the training.

Unlike many training organisations, we only use chartered safety practitioners to carry out our training. It is our belief that trainers should be able to talk around the subject with authority, rather than just sticking to the script.

With over 25 years of practical health and safety application in the public sector, manufacturing, healthcare, education and construction, the trainers we use for this course keep the sessions relevant and of an exceptional quality.

The cost of the course is £450 + vat
